PROFILE

Computer Science undergraduate with experience in backend development, full-stack applications, and AI-based projects. Worked on REST APIs, React applications, and machine learning prototypes using Python and FastAPI. Interested in building practical software systems and applying AI to real-world problems.

EDUCATION

B.E, Computer Science & Engineering 2023–2027 (in progress)
Rajalakshmi Institute of Technology

- CGPA: 8.3/10

HSC, Christuraja Matric Higher Secondary School 2023

- Percentage: 92.5%

EXPERIENCE

Full-Stack Developer Intern, PropGrowthX 4 Months
REST APIs | Backend Services | React | API Integration | UI/UX Design

- Developed RESTful APIs for a real-time property management and property-buying platform, handling detailed property, tenant, and transaction data.
- Implemented backend workflows for property listings, availability tracking, user interactions, and purchase-related operations.
- Enabled efficient backend–frontend integration to support dynamic updates and scalable application behavior.
- Contributed to UI/UX improvements by refining layouts, user flows, and interaction design.

SKILLS

- **Programming:** Java, Python, JavaScript
- **Databases:** MySQL, MongoDB
- **Frameworks/Tools:** React.js, Springboot, FastAPI, Node.js, Git/GitHub, Docker (basic)
- **Soft Skills:** Team Collaboration, Adaptability, Communication

FIELD OF INTEREST

Backend & API Development | Artificial Intelligence & Machine Learning | Full-Stack Development

PROJECTS

SCAMSHIELD (Cybersecurity + Trust Intelligence Platform)
Java | Spring Boot | React.js | REST APIs | Threat Intelligence APIs

- Developing a platform to help students identify fraudulent internship offers, phishing emails, and suspicious recruiter domains.
- Building backend services for email analysis, domain reputation checks, and recruiter trust scoring using cybersecurity enrichment techniques.
- Integrating threat intelligence and domain verification workflows to improve scam detection and trust assessment.

MULTIMODAL FAKE REVIEW DETECTION SYSTEM (Research Project)
Python | PyTorch | Transformers(BERT) | FastAPI | Docker

- Co-authored a peer-reviewed research paper on fake review detection using multimodal analysis techniques.
- Explored approaches involving text and image-based review analysis using deep learning models.
- Contributed to prototype development and API-level experimentation using FastAPI.

ACHIEVEMENTS

- Participant, **Smart India Hackathon (SIH) 2025** – Developed *Focus App*, an AI-powered Android productivity and communication management system with intelligent call blocking, and urgent message summarization using OpenAI GPT API, and non-intrusive notifications.
- **Shortlisted, TESCO Media Innovation Jam – Hackathon** – Selected among top teams for innovative problem-solving and technical implementation.
- **Student Placement Ambassador** – Coordinated student engagement for campus placements and internships.
- Co-authored a **peer-reviewed research paper** on multimodal fake review detection in E-Commerce.
- Certifications: **Machine Learning** (Stanford), **Google Cyber Security**, **Front-End Development**.
